

Dinesh Kumar Peddakotla
Automation Engineer
Mobile: 9542409637
Email id: dineshkumar.icon@gmail.com

Summary

QA Engineer with 4+ years of experience in automation and manual testing. Proven success in developing and executing test plans, creating automated tests and skilled in creating bug reports. Certified in ISTQB Foundation Level Certificate.

Technical Skills:

Tools	Selenium, Rest Assured, Cypress, POSTMAN, Cucumber, TestNG, Playwright, Jmeter, Appium
Programming/Scripting Language	Java, Javascript, JSON, SQL, C# .Net
CICD Tools	Jenkins, Azure devops
Automation Testing	UI, Desktop, Web services - Rest API
Testing Frameworks	Cucumber, Data driven, Keyword and Hybrid driven
Test Management Tools	JIRA, Asana, QASE, Zephyr, Azure Devops
Testing Methodologies	BDD, Agile model
Domain Experience	E commerce, ERP, Taxation, Payment Gateway, online gaming
Build Tools	Maven, Gradle,
Version Control	Git, Gitlab, Bitbucket, Azure Repos
IDE	IntelliJ, Eclipse, Vs Code, Visual studio

Experience Summary

- Having 4+ Years of experience in Software testing having knowledge in E commerce, ERP Domain, Gaming, Taxation and Payment Gateway.
- Excellent skills in Defect Reporting and analyzing the root cause if defect.
- Developed Automation Framework from scratch for an Organization using Selenium Web Driver with Java for UI Automation which supports for both TDD and BDD approach.
- Developed Rest Assured with Java for API Automation in Hybrid framework model which supports for both TDD and BDD approach.
- Maintained and developed the new scenarios with .net with playwright automation framework
- Developed the scenarios and writing the locators using the AI and specially used the github copilot extensively while developing the script and used AI to identify the failure of the scenario and used to fix the scenario
- Worked on framework stabilization while executing the huge number scenarios in pipelines
- Good Knowledge in Web Application Automation using Selenium & Java, playwright java and playwright .net
- Executing and Analyzing the Regression scenarios in automation and will raise the bugs if any issues found and will check App Insights in Azure for root cause.
- Excellent understanding of Defect status life cycle and Defect Reporting for it.
- Experience in Functional Testing, Regression Testing, Re-Testing, System Testing and Smoke Testing.
- Experience in Agile Methodology (Scrum).
- Participated in Scrum Meeting to discuss the Test status report and attended the retrospective and work item discussions in a sprint.
- Designing and executing test cases to ensure that business requirements and functional specifications are tested.
- Proficient in Manual Testing-with Project management tools such as JIRA, ASANA
- Good knowledge in TestNG, Maven, GIT, POM (Page object Model), Apache POI, LOG4J2, core Java concepts, JSON, GIT & Framework, C#.net.
- Good Knowledge about Cucumber, Data Driven, Key Word and Hybrid frameworks.
- Knowledge about Gradle, Cypress, Jmeter, Playwright, Appium, Jenkins, Azure Devops.
- Experience in Maintaining Different test environments.

- Involved in patching, regression suite automation and end-to-end automation of test scripts for web applications using selenium, BDD and Cypress.
- Have knowledge on working in both Linux and Windows environments.
- Designing Test scripts using Element locators, Web Driver methods and TestNG Annotations.
- Hands on experience in developing Hybrid Driven Framework using Selenium Web Driver.
- Executed automation scripts on different browsers/environments & reported defects to the Development team.
- Strong knowledge in Software Development Life Cycle (SDLC), Software Testing Life Cycle (STLC) and Testing Concepts.

Key Learning & Achievements

- **Project Value Adds** - Identified the pain areas in Functional testing and created several tools reduce the manual efforts
- **Implementation Support** - Successfully implemented BDD with UI and API Automation in single framework in projects.
- **Delivery** - Successfully handled project requirements and implemented in testing phase.
- **Domain Experience** - Domain knowledge enrichment with the E commerce and ERP Website.
- **Knowledge Gathering**
- **Bridging Relationship** - Coordinated with developers, project managers and system analyst to resolve various issues related to bug fixing, re-analyzing certain functionalities and providing creative feedback.

Project Experience

1. Safesend Technologies part of Thomson Reuters

Role : QA Engineer

Tools : Playwright, .net C#, Reqnroll, Extent reports, Json, Nunit, BDD, Postman, swagger, Visual studio, github copilot, Azure Repo, Browserstack, Bug capture, Azure Devops, AI testing etc;

Description: Safesend Technologies is an Indian technology firm and an extension of the US-based company SafeSend, specializing in tax workflow automation software for accounting professionals

Roles & Responsibilities:

- Developed automated test suites for a websites to ensure quality and accuracy of software features.
- Integrated UI Scripts and API Scripts in single framework and generated HTML reports with all logs in a report
- Generated detailed bug reports for software development teams and created weekly report as well about the status and bugs.
- Used defect tracking tools such as Azure devops to track software defects and Test Plan in Azure Devops for test cases management.
- Analyzed user requirements and specifications to ensure software quality.
- Performed Functionality Testing, Retesting and Regression Testing, performance testing, sanity and some testing.
- Executing and analyzing the Automation scripts and will raise the bugs if any issues found and worked on code stabilization
- Maintain the team, guiding and monitoring the other members in work and Regularly gives updates to higher management regarding the team progress.

2.Blazeclan Technologies Pvt Ltd

Client : Qptty

Role : Automation QA

Tools : Selenium, Cucumber, Testng, Rest Assured, Log4J2, JSON, JAVA, Cucumber Extent Reports, Web Driver Manager etc;

Description: Optty is a payment aggregator application is used to provide different payment method for an application for payment transactions.

Roles & Responsibilities:

- Developed automated test suites for a websites to ensure quality and accuracy of software features.
- Integrated UI Scripts and API Scripts in single framework and generated HTML reports with all logs in a report
- Generated detailed bug reports for software development teams and created weekly report as well about the status and bugs.
- Used defect tracking tools such as Jira to track software defects and Zephyr for test cases management.
- Analyzed user requirements and specifications to ensure software quality.
- Performed Functionality Testing, Retesting and Regression Testing and performance testing.

Client : Quantum Gaming

Role : QA Enginner

Tools : JMeter etc;

Description: Quantum Gaming is gaming platform where multiple third party games are hosted for playing a game.

Roles & Responsibilities:

- Identified the all api required for performance testing and written the script in jmeter.
- Executing the script by applying a uniformly distributed load over a period.
- Generated detailed reports for software development teams for identifying performance related issues about the application.
- Executed the script and monitor the server when load is applied and generated the aggregated reports and shared with client on regular basis.

Client : Camilla

Role : Automation QA

Tools : Selenium, Cucumber, Testng, Rest Assured, Log4J2, JSON, JAVA, Cucumber Extent Reports, Web Driver Manager etc;

Description: Camilla is a fashion based Ecommerce application is used to place an orders and NsetSuite is used for order management and inventory adjustment for tracking order details.

Roles & Responsibilities:

- Developed automated test suites for 4 websites to ensure quality and accuracy of software features.
- Integrated UI Scripts and API Scripts in single framework and generated HTML reports with all logs in a report
- Generated detailed bug reports for software development teams and created weekly report as well about the status and bugs.
- Used defect tracking tools such as ASANA to track software defects and QASE for test cases management.
- Analyzed user requirements and specifications to ensure software quality.
- Performed Functionality Testing, Retesting and Regression Testing

Client: Ultra Tech

Role: Automation QA

Roles & Responsibilities:

- Understanding the customer requirement by analyzing SRS document
- Designing & executing test cases from Functional specifications & Participated in the Test case review meetings.
- Performed Functionality Testing, Retesting and Regression Testing.
- Interact with developers and discussed technical problems, Bugs Tracking.
- Reporting the Regular status to the higher authorities in a timely manner.

Educational Qualification:

Academic Information	Degree	CGPA/Percentage	Year	University / Board
Bachelor's Degree	B.Tech	8.07	2019	Hindustan Institute of Technology And Science

Certifications Details:

Certification Name	Provider
ISTQB Foundation	ITB(ISTQB)
Level AWS Cloud Practitioner	AWS
Azure Fundamentals(AZ900)	Microsoft

Trainings Conducted:

- Provided training to QA's about Hybrid Framework with Selenium and how to use sonarlint in Automation code.
- Provided training to QA's regarding the AI usage for developing the automation scripts and usage of playwright specific methods for better stabilization
